FEEDING DIRECTIONS: GRO'N WIN

Gro'N Win is formulated to be fed as a ration balancer to complement a grass or grass/legume mixed forage (hay or pasture) that has a Relative Feed Value (RFV) greater than 103. Feed the amount recommended below when the horse's mature weight is between 880 and 1100 pounds. Use the Buckeye Growth and Performance Chart to determine the amount of Gro'N Win® to feed per day for

* Feed oats only if necessary to increase or maintain body weight.

** MIN (Minimum lbs/day) and MAX (Maximum lbs/day)

(1) The numbers above are listed as lbs of feed per animal per day.

(2) The quality and digestibility of the hay and pasture are heavily dependent on the maturity of the plant (when harvested). It is extremely important that the horse receives the minimum amount of hay listed in the table (or its equivalent in pasture) in order to maintain desired fiber levels in the total ration (i.e. gut function).

(3) The oats may be increased or decreased depending on the body condition score of the horse, but the stated levels of GRO'N WIN® must be maintained.

(4) Buckeye Harvest Salt (block, brick, or granular) plus Buckeye Grass Plus® Mineral & Vitamin Mix should be provided free choice.

(5) Always maintain a clean, fresh water supply.
